

HousingPulse

Data Analytics for Housing Accessibility Assessment:

Analyze large datasets, including demographic data and geographic information, to assess the accessibility of housing stock at a city or regional level. By identifying areas with inadequate accessibility infrastructure or high concentrations of inaccessible housing units, policymakers can prioritize targeted interventions and investments to improve accessibility. Also identify possible retrofitting and abandoned lots (private or public) for possible gorilla action take over.

Looking for 3d rotation of app - and possible interaction with geometries.
